Gear Pumps KF 0

Function

KF 0 – A pump for process engineering.

In numerous technical processes dosing liquids is the focus of the task. PUR components, softeners, resins, lacquers, paints are just some of the most important liquids with a broad application range.

The accuracy, evenness and reproducibility with which these products can be processed are also decisive for the quality of the final product.

The KRACHT gear pump size KF 0 is especially suitable for these applications.

The KF 0 is an external gear pump with flow rates of 0.5 cm³/r to 4 cm³/r.

The grading of the total of 8 nominal sizes makes it easier to set the desired dosing ratios. The fine gearing with a high number of teeth guarantees a low-pulsation volume flow.

All gear parts and the bearing bushes are protected even in the standard design by a special coating against wear and corrosion, so that even filled media up to a specific grain size and hardness of the filled material can be conveyed. Because of the backlash dimensioning in combination with precise production the KF 0 has very good volumetric efficiency over a wide pressure range.

Various types of seals, such as rotary shaft seals and double rotary shaft seals can be selected depending on the task, whereby the latter version enables operations with a water seal (quench) to prevent the pumping medium from hardening or crystallising.

In combination with a KRACHT gear volume meter and the KRACHT evaluation electronics the KF 0 can be extended to a highly precise dosing unit.

General characteristics

Fixing type	Flange fixing
Pipe connection	Threaded connection
Direction of rotation	Clockwise or anticlockwise
Installation location	Any, see dimensional drawings
Weight	2.2 kg

Operating characteristics

Capacity	$V_g = 0.5/0.8/1/1.6/2/2.5/3/4 \text{ cm}^3/\text{r}$
Operating pressure	<p>Suction side</p> <p>$p_{e \text{ min}} = -0.4 \text{ bar}$ (-0.6 bar briefly for starting status)</p> <p>$p_{e \text{ max}} = 2 \text{ bar}$</p> <p>Pressure side</p> <p>$p_{n \text{ max}} = 120 \text{ bar}$ (depending on the pumping medium, viscosity and pumping volume)</p>
Speed	$n = \dots 3000 \text{ min}^{-1}$ (depending on viscosity)
Viscosity	<p>$v_{\text{min}} = 10 \text{ mm}^2/\text{s}$</p> <p>$v_{\text{max}} = 20\,000 \text{ mm}^2/\text{s}$</p>
Media temperature	<p>$\vartheta_{m \text{ max}} = 90 \text{ }^\circ\text{C NBR}$</p> <p>$150 \text{ }^\circ\text{C FKM}$</p> <p>$200 \text{ }^\circ\text{C PTFE}$ (rotary shaft seal)</p>
Ambient temperature	<p>$\vartheta_{u \text{ min}} = -20 \text{ }^\circ\text{C}$</p> <p>$\vartheta_{u \text{ max}} = +60 \text{ }^\circ\text{C}$</p>

Materials

Pump housing	GG 30, DIN 1691
Gearing	Steel 1.7139 chemically nickel plated with SiC inclusions
Bearing bushes	Steel ETG 100 chemically nickel plated with SiC inclusions
Seals	NBR, FKM, PTFE

Gear Pumps KF 0

Characteristics max. permissible operating pressure in dependence on viscosity

Nominal size	Permissible operating pressure in bar for viscosity			
	10 mm ² /s	30 mm ² /s	100 mm ² /s	> 500 mm ² /s
0.5	10	30	50	60
0.8	15	40	60	70
1	15	40	60	70
1.6	20	60	80	100
2	20	60	80	100
2.5	30	60	100	120
3	30	60	100	120
4	40	80	120	120

The values are valid for the speed range $n = 1000 \dots 3000 \text{ min}^{-1}$.

Then max. operating pressures must be reduced for speeds $< 1000 \text{ min}^{-1}$

Drive capacity and rate of flow

Gear Pumps KF 0 with magnetic coupling

Function

With various applications conventional seals come up against their limits. Typical applications can be found in PUR plants, refrigerating installations and vacuum plant. It is possible to fit the KF 0 with a magnetic coupling for these applications.

The magnetic coupling serves as a shaft seal and to transmit the torque. The outer rotor of the magnetic coupling is placed on the motor shaft and the inner rotor directly on the pump shaft. The torque is transmitted between the outer and inner rotors through the magnetic forces. The split case, which seals the pump hermetically, is located between the two rotors.

The magnetic coupling is used if an absolutely tight seal is required between the pump chamber and the atmosphere, e.g. for dosing isocyanate, where contact with the air would lead to an undesired hardening of the medium. It can be used in vacuum operations, e.g. filling brake liquid, and reliably prevents air penetrating into the system. Non-leak operations are also guaranteed when used in sealed systems with a high admission pressure on the pump suction side. The magnetic coupling is predestined for dosing hazardous and harmful media.

General characteristics

Fixing type	Flange fixing
Pipe connection	Threaded connection

Gear Pumps KF 0 with magnetic coupling

Type code

Overview of our complete program

Transfer pumps

Transfer pumps for lubricating oil supply equipment, low pressure filling and feed systems, dosing and mixing systems.

Flow Measurement

Gear and turbine flow meters and electronics for volume and flow metering technology in hydraulics, processing and laquering technology.

Mobile hydraulics

Single and multistage high pressure gear pumps, hydraulic motors and valves for construction machinery, vehicle-mounted machines.

Industrial hydraulics

Cetop directional control and proportional valves, hydraulic cylinders, pressure, quantity and stop valves for pipe and slab construction, hydraulic accessories for industrial hydraulics (mobile and stationary use).

With our decades of experience, we are at your side, world-wide, for the professional mastery of specific applications and complete solutions in hydraulics and process technology.
